## Objectives

- Learn about how to handle the logistical aspects of transportation including preparation, planning, and communication.
- International context of neonatal and pediatric transport medicine.
- To identify and manage the most frequent pathologies and their complications in neonatal and pediatric critical care transport.
- To become familiar with transport equipment and be able to troubleshoot problems that may arise.
- To develop an understanding of specific adaptations needed for aeromedical retrievals.
- To practice the skills and competencies required for transportation through practical sessions and high fidelity simulation.
